31.1 Show device log message.....	233
31.2 Clear logging in logbuff channel.....	234

Getting Started

This section provides an introduction to the web-based configuration utility, and covers the following topics:

- Powering on the device.
- Connecting to the network.
- Starting the web-based configuration utility.

Power

Connecting to Power

Power down and disconnect the power cord before servicing or wiring a switch.

Do not disconnect modules or cabling unless the power is first switched off. The device only supports the voltage outlined in the type plate. Do not use any other power components except those specifically designated for the switch.

Disconnect the power cord before installation or cable wiring.

The switch is powered by the AC 100-240 V 50/60Hz internal high-performance power supply. It is recommended to connect the switch with a single-phase three-wire power source with a neutral outlet, or a multifunctional computer professional source.

Connect the AC power connector on the back panel of the switch to the external power source with the included power cord, and check the power LED is on.

Figure 1. Rear View AC Power Socket.

Connecting to the Network

To connect the switch to the network:

1. Connect an Ethernet cable to the Ethernet port of a computer.
2. Connect the other end of the Ethernet cable to one of the numbered Ethernet ports of the switch. The LED of the port lights if the device connected is active.
3. Repeat Step 1 and Step 2 for each device to connect to the switch.

We strongly recommend using CAT-5E or better cable to connect network devices. When connecting network devices, do not exceed the maximum cabling distance of 100 meters (328 feet). It can take up to one minute for attached devices or the LAN to be operational after it is connected. This is normal behavior.

Connect the switch to end nodes using a standard Cat 5/5e Ethernet cable (UTP/STP) to connect the switch to end nodes as shown in the illustration below.

Switch ports will automatically adjust to the characteristics (MDI/MDI-X, speed, duplex) of the device to which the switch is connected.

Starting the Web-based Configuration Utility

This section describes how to navigate the web-based switch configuration utility. Be sure to disable any pop-up blocker.

Browser Restrictions:

- If you are using older versions of Internet Explorer, you cannot directly use an IPv6 address to access the device. You can, however, use the DNS (Domain Name System) server to create a domain name that contains the IPv6 address, and then use that domain name in the address bar in place of the IPv6 address.
- If you have multiple IPv6 interfaces on your management station, use the IPv6 global address instead of the IPv6 link local address to access the device from your browser.

Launching the Configuration Utility

To open the web-based configuration utility:

1. Open a Web browser.
2. Enter the IP address of the device you are configuring in the address bar on the browser (factory default IP address is 192.168.2.1) and then press Enter.

When the device is using the factory default IP address, its power LED flashes continuously. When the device is using a DHCP assigned IP address or an administrator-configured static IP address, the power LED is lit a solid color. Your computer's IP address must be in the same subnet as the switch. For example, if the switch is using the factory default IP address, your computer's IP address can be in the following range: 192.168.2.x (whereas x is a number from 2 to 254).

After a successful connection, the login window displays.

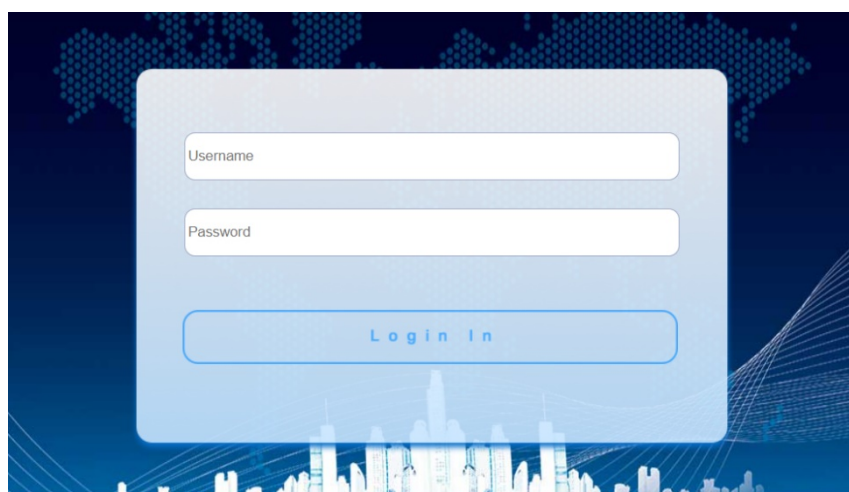

Figure 2. Login Window

Logging In

The default username is admin and the default password is admin. The first time that you log in with the default username and password, you are required to enter a new password.

To log in to the device configuration utility:

1. Enter the default user ID (admin) and the default password (admin).
2. If this is the first time that you logged on with the default user ID (admin) and the default password (admin) it is recommended that you change your password immediately.

When the login attempt is successful, the System Information window displays.

Figure 3. System Information.

If you entered an incorrect username or password, an error message appears and the Login page remains displayed on the window. If you are having problems logging in, please see the Launching the Configuration Utility section in the Administration Guide for additional information.

Logging Out

By default, the application logs out after ten minutes of inactivity.

To logout, click Logout in the top right corner of any page. The system logs out of the device.

When a timeout occurs or you intentionally log out of the system, a message appears and the Login page appears, with a message indicating the logged-out state. After you log in, the application returns to the initial page.

Web-based Switch Configuration

The smart switch software provides rich Layer 2 functionality for switches in your networks. This chapter describes how to use the web-based management interface (Web UI) to configure the switch's features.

For the purposes of this manual, the user interface is separated into four sections, as shown in the following figure:

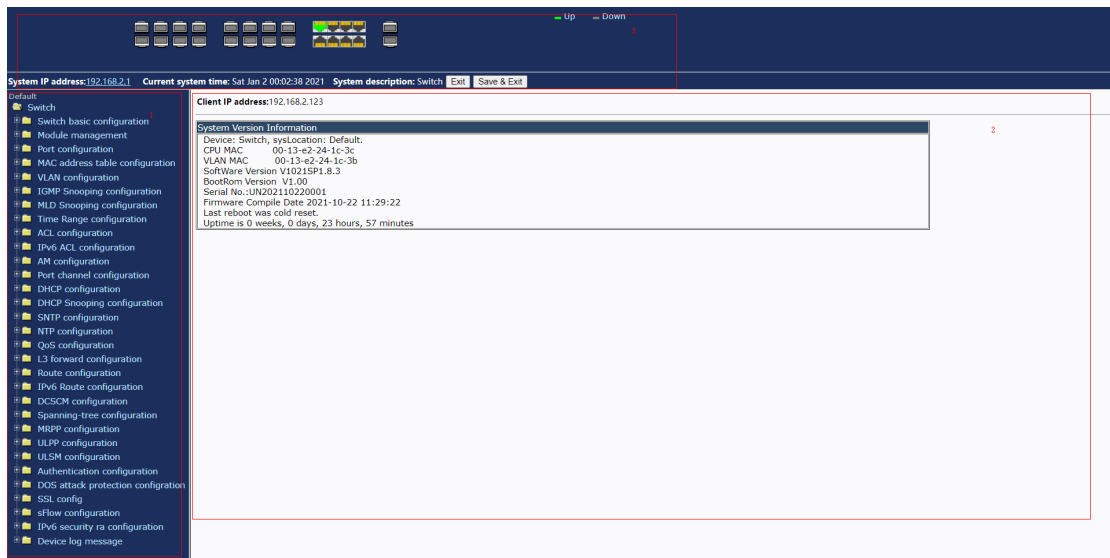

Figure 4. User Interface.

Console Port Interface

The smart switch has a monitor port (Console port). Rate 9600bps, standard RJ45 plug.

Use a dedicated monitoring cable to lead the port to the PC serial port connection, as follows:

Figure 5.

The RJ45 connector used by the Console port is shown in the figure below, and the RJ45 plug corresponds to the RJ45 socket, from left to right numbered from 1 to 8.

Figure 6.

This cable is used to connect the console port of the switch to the external monitoring terminal. One end of the RJ45 eight-pin plug, the other end is a 25-hole plug(DB25) and 9-hole plug(DB9), RJ45 head into the switch's console port socket, DB25 and DB9 can be used according to the requirements of the terminal serial port, the cable internal connection schematic as follows:

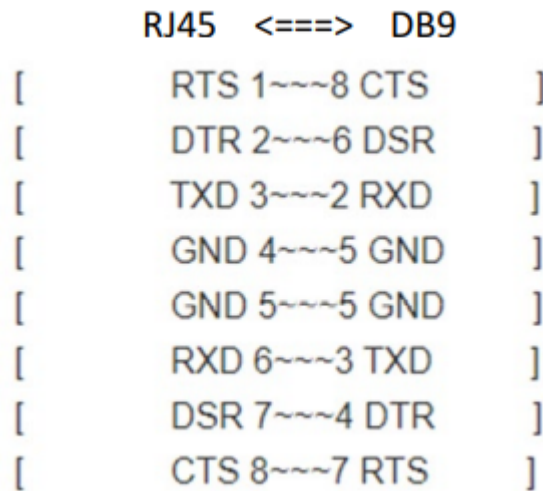

Figure 7.

1. Switch basic configuration

1.1 Switch basic configuration

1.1.1 Login user configuration

Login user management module, users in this module can add or delete user operations.

Login username and password configuration	
User	<input style="width: 80%;" type="text"/>
Password	<input style="width: 80%;" type="password"/> <input type="checkbox"/> Encrypted text
Priority	<input style="width: 80%;" type="text"/>
Operation	Remove <input type="button" value="v"/>
<input type="button" value="Apply"/>	

User			
User name	Password	State	Priority
admin	admin	Plain text	15

Figure 8.

User	User name to operate, 1-32 characters.	
Password	User password, choose the password encryption, otherwise no encryption of 1-32 characters.	
Priority	Used to specify permission level, default level 15.	
Operation	Add	Create new users.

	Remove	Delete the specified user (password and priority can not be entered).
--	--------	---

1.1.2 Login user authentication method configuration

Login user authentication method configuration module, the user can configure console.vty.web authentication method used in login, authentication method can be any one or combination of Local.RADIUS and TACACS.preferences from left to right when the login method is combined configuration. If the user has passed the authentication method, the authentication method of the lower preference is ignored. As long as you pass an authentication method, the user can log in. AAA functions and RADIUS servers should be configured before using RADIUS authentication. If local authentication is configured without configuring a local user, the user will be able to log on to the switch through the console method.

Login user authentication method configuration	
Login method	Console ▾
Authentication method1	None ▾
Authentication method2	None ▾
Authentication method3	None ▾
<input type="button" value="Apply"/> <input type="button" value="Default"/>	

Login user authentication method				
Login method	Authentication method1	Authentication method2	Authentication method3	
console	None	None	None	None
vty	local	None	None	None
web	local	None	None	None

Figure 9.

Login method	Authentication method	
console	local	Authentication using the local user account database.
vty	radius	Authentication using remote Radius server.
web	tacacs	Authentication using remote Tacacs server.
Default	Default console no authentication, vty and web local authentication.	

1.1.3 Logging user Security IP management

Login user security IP configuration module, where users can configure the security IP. IPv6 address for login switch, or configure access control list.

Login user Security IP Set	
Security IP address	<input type="text"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	
Login Access control list Set	
Ipv4 access control list <input type="button" value="v"/>	<input type="text"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	
Login user Security IPv4 List	
end of security IPv4	
Login user Security IPv6 List	
end of security IPv6	
Login Ipv4 access control list	
end of ipv4 access list	
Login Ipv6 access control list	
end of ipv6 access list	

Figure 10.

Security IP address	Fill in the specified security IP or IPv6 address (the access control list is valid until the IPv6 address is filled in).	
IPv4/IPv6 access control list	Standard access control list number, scope 1-64.	
Operation	Add	Add address or list number.
	Remove	Delete address or list number.

1.1.4 Basic configuration

Basic configuration module, in which users can configure switch current time, exit privilege mode timeout and switch name respectively.

Basic clock configuration	
HH:MM:SS	<input type="text"/>
YYYY.MM.DD	<input type="text"/>
Apply	<input type="button" value="Apply"/>

Configure exec timeout	
Timeout(minute)	<input type="text"/>
Timeout(second)	<input type="text"/>
Operation	Configuration <input type="button" value="v"/>
<input type="button" value="Apply"/>	<input type="button" value="Apply"/>

Switch name configuration	
Switch name	<input type="text"/>
Operation	Configuration <input type="button" value="v"/>
Apply	<input type="button" value="Apply"/>

Figure 11.

HH:MM:SS	Current time, format: hours:minutes:seconds.
YYYY.MM.DD	Current date, format: Year.Month.Day.

Timeout (minute)	Exit privilege mode timeout score 0-35791.	
Timeout (second)	Seconds of exit privilege mode timeout (not set separately), 0-59 seconds.	
Operation	Configuration	Configuration operations.
	Default	Restore default (default timeout: 10 minutes).

Switch name	Fill in the new name of the switch to be changed, 1-64 characters.	
Operation	Configuration	Configuration operations.
	Default	Do recovery default (default name: Switch).

1.1.5 Save current running-configuration

Save the current configuration module, the user can save the current set configuration, can also leave the factory initial settings restart, but also choose whether to save the current set configuration before restart.

Save current running-configuration	
<input type="text"/>	<input type="button" value="Apply"/>

Reboot with the default configuration	
<input type="text"/>	<input type="button" value="Apply"/>

Save current configuration before reboot?	
Yes <input type="button" value="v"/>	<input type="text"/>
<input type="button" value="Apply"/>	<input type="button" value="Apply"/>

Figure 12.

1.2 SNMP authentication

1.2.1 SNMP authentication

1.2.1.1 User

SNMP user management module, users can add or delete SNMP user operations in this module.

Users	
SNMP username	<input type="text"/>
SNMP group	<input type="text"/>
Security level	noAuthNoPriv ▼
Authentication protocol:	MD5 ▼
Authentication password:	<input type="password"/>
Privacy protocol:	DES ▼
Privacy password:	<input type="password"/>
Ipv4 access control list	<input type="text"/>
Ipv6 access control list	<input type="text"/>
Operation	Add ▼
<input type="button" value="Apply"/>	

Figure 13.

SNMP username	User name to operate, 1-32 characters.	
SNMP group	User group to join, 1-32 characters.	
Security level	noAuthNoPriv	Uncertified non-encrypted level.
	authNoPriv	Authentication but not encryption level.
	authpriv	Authentication and encryption level.
Authentication protocol:	MD5	HMAC MD5 algorithm for authentication.
	SHA	Authentication uses HMAC SHA algorithms.
Authentication password:	Password for authentication.	
Privacy protocol:	DES	Encryption DES algorithm.
	AES	Encryption AES algorithm.
	3DES	Encryption with 3DES algorithm.
Privacy password:	Password for encryption.	
Ipv4 access control list	Standard IPv4 access control list number, range: 1-64 characters.	
Ipv6 access control list	Standard IPv6 access control list number, range: 1-64 characters.	
Operation	Add	Add SNMP users.
	Remove	Delete SNMP users.

1.2.1.2 Groups

SNMP group management module in which users can add or delete SNMP group operations.

Groups	
SNMP group	<input type="text"/>
Security level	noAuthNoPriv ▼
Read SNMP view	<input type="text"/>
Write SNMP view	<input type="text"/>
Notify SNMP view	<input type="text"/>
Operation	Add ▼
<input type="button" value="Apply"/>	

Figure 14.

SNMP group	User group name to operate, 1-32 characters.	
Security level	noAuthNoPriv	Uncertified non-encrypted level.
	authNoPriv	Authentication but not encryption level.
	authpriv	Authentication and encryption level.
Read SNMP view	Name of readable view, including 1-32 characters.	
Write SNMP view	Name of writable view, including 1-32 characters.	
Notify SNMP view	Notice the name of the view, including 1-32 characters.	
Operation	Add	Add SNMP groups.
	Remove	Delete SNMP groups.

1.2.1.3 Views

SNMP view management module in which users can add or delete SNMP view operations.

Views	
SNMP view	<input type="text"/>
OID	<input type="text"/>
Type:	Include ▼
Operation	Add ▼
<input type="button" value="Apply"/>	

SNMP view	OID	Type
v1defaultviewname	1.0.	Include
v1defaultviewname	1.2.	Include
v1defaultviewname	1.3.	Include

Figure 15.

SNMP view	User view name to operate, 1-32 characters.
OID	OID number to operate, decimal.

Type:	Include	Include this OID.
	Exclude	Exclude this OID.
Operation	Add	Add view.
	Remove	Delete view.

1.2.1.4 SNMP engineid configuration

SNMP Engineid configuration module, the user can configure SNMP Engineid operation in this module.

SNMP engineid configuration	
Engineid	<input type="text"/>
Operation	Configuration ▾
<input type="button" value="Apply"/>	
Engineid	
18c308c6b3c91aab	

Figure 16.

Engineid	Engine id, Hex, 1-32 characters.	
Operation	configuration	Configuration operations.
	Default	Restore default (default is company ID plus local MAC address).

1.2.2 SNMP management

SNMP network management function switch module, users can enable or disable SNMP functions.

SNMP management	
SNMP Agent state	Open ▾
RMON state	Open ▾
Trap state	Open ▾
Security IP state	Open ▾
<input type="button" value="Apply"/>	

Figure 17.

1.2.3 Community managers

The group string management module where users can SNMP group string management and configure TRAP management settings.

Community managers	
Community string	<input type="text"/>
Access priority	Read only ▾
Operation	Add ▾
<input type="button" value="Apply"/>	

TRAP manager configuration	
Trap receiver	<input type="text"/>
Community string	<input type="text"/>
Version	1 ▾
Security level	noAuthNoPriv ▾
Operation	Add ▾
<input type="button" value="Apply"/>	

Figure 18.

Community string	Community string name, 1-255 characters.	
Access priority	Read only	Read-only permission level.
	Read and write	Read and write permission level.
Operation	Add	Do Community string add operations.
	Remove	Do Community string delete operations.

Trap receiver	Recipient IPv4/IPv6 address of Trap information.	
Community string	Community string name, V1/V2 version: 1-255 characters, V3 version: 1-24 characters.	
Version	Three versions: V1/V2C/V3.	
Security level (V3 version support only)	noAuthNoPriv	Uncertified non-encrypted level.
	authNoPriv	Authentication but not encryption level.
	authpriv	Authentication and encryption level.
Operation	Add	For Trap information receiver add operation.
	Remove	For Trap information receiver remove operation.

1.2.4 Configure snmp manager security IP

The administrator IP the address setting module, where the user can add or delete the SNMP manager's safe IP address.

Figure 19.

Security IP address	SNMP Management Security IPv4/IPv6 Address.	
Operation	Add	Add a Security IP.
	Remove	Remove a Security IP.

1.2.5 SNMP statistics

SNMP statistical information module, users in this module can view the SNMP function feedback information.

```

Information feedback window
SW1# show snmp
0 SNMP packets input
  0 Bad SNMP version errors
  0 Unknown community name
  0 Illegal operation for community name supplied
  0 Encoding errors
  0 Number of requested variables
  0 Number of altered variables
  0 Get-request PDUs
  0 Get-next PDUs
  0 Set-request PDUs
0 SNMP packets output
  0 Too big errors (Max packet size 1500)
  0 No such name errors
  0 Bad values errors
  0 General errors
  0 Get-response PDUs
  0 SNMP trap PDUs

```

Figure 20.

1.3 SSH management

1.3.1 Switch on-off SSH

SSH function switch module in which the user can enable or disable switches by SSH.

Figure 21.

1.3.2 SSH management

SSH management configuration module, the user can configure the SSH timeout, SSH authentication times and SSH RSA secret key modulus, and can also view the user login status of the SSH server.

The screenshot shows three configuration panels for SSH management:

- SSH timeout management:** Includes a text input for 'SSH timeout', a dropdown for 'Operation' set to 'Configuration', and an 'Apply' button.
- SSH reauthentication management:** Includes a text input for 'SSH reauthentication', a dropdown for 'Operation' set to 'Configuration', and an 'Apply' button.
- Create SSH RSA key:** Includes a text input for 'SSH RSA key' with the value '1024' and an 'Apply' button.

Below these panels is a table titled 'Show SSH Server's State' with the following columns:

Num	Version	Status	SSH username

Figure 22.

SSH timeout	Timeout of exit SSH login status, 10-600 seconds.	
Operation	Configuration	Configuration operations.
	Default	Recovery default (default 180 s).
SSH reauthentication	SSH number of re-authentications when logged in, 1-10.	
Operation	Configuration	Configuration operations.
	Default	Restore default (default re-authentication 3 times).
SSH RSA key	A module for calculating RSA keys, ranging from 768-2048, default 1024.	

1.4 Firmware update

1.4.1 TFTP service

1.4.1.1 TFTP client service

TFTP client service module, the user can upload or download files by TFTP way, and can upgrade the firmware of the switch by this method.

The screenshot shows the 'TFTP client service' configuration panel with the following fields:

- Server IP address:
- Local file name:
- Server file name:
- Operation type: Upload (dropdown)
- Transmission type: binary (dropdown)

An 'Apply' button is located at the bottom right of the panel.

Figure 23.

Server IP address	TFTP address IP peer server, point decimal.	
Local file name	Name of destination file to upload or download, 1-100 characters.	
Server file name	Source name to upload or download, 1-100 characters.	
Operation type	Upload	To upload files.
	Download	To download files.
Transmission type	binary	Transfer files in binary format (default).
	ascii	Transfer files in ascii format.

1.4.1.2 TFTP server service

TFTP server-side service module, users can configure the TFTP server settings in this module.

Figure 24.

Server state	Open	Enable TFTP server functionality.
	Close	Disable TFTP server functionality (default).
TFTP Timeout	TFTP service exit timeout, range 5-3600 s (default 600 s).	
TFTP Retransmit times	TFTP number of retransmissions after transmission failure, range 1-20 (default 5).	
Operation	Configuration	Configuration operations.
	Default	Restore default.

1.4.2 FTP service

1.4.2.1 FTP client service

FTP client service module, the user can upload or download files by FTP way, and can upgrade the firmware of the switch by this method.

FTP client service	
Server IP address	<input type="text"/>
User	<input type="text"/>
Password	<input type="text"/>
Local file name	<input type="text"/>
Server file name	<input type="text"/>
Operation type	Upload <input type="button" value="v"/>
Transmission type	binary <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 25.

Server IP address	FTP address IP peer server, point decimal.	
User	FTP server-to-server username, 1-100 characters.	
Password	FTP server-side user password, 1-100 characters.	
Local file name	Name of destination file to upload or download, 1-100 characters.	
Server file name	Source name to upload or download, 1-100 characters.	
Operation type	Upload	To upload files.
	Download	To download files.
Transmission type	binary	Transfer files in binary format (default).
	ascii	Transfer files in ascii format.

1.4.2.2 FTP server service

FTP server service module, the user can configure various settings of FTP server.

FTP server service	
FTP server State	Close <input type="button" value="v"/>
FTP Timeout	<input type="text" value="600"/>
Operation	Configuration <input type="button" value="v"/>
<input type="button" value="Apply"/>	

FTP user name and password setting	
User	<input type="text"/>
Password	<input type="text"/>
State	Plain text <input type="button" value="v"/>
Operation type	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 26.

FTP server state	Open	Enable FTP server functionality.
	Close	Disable FTP server functionality (default).
FTP Timeout	FTP service exit timeout, range 5-3600 s (default 600 s).	

Operation	Configuration	Configuration operations.
	Default	Restore default.
User	FTP service username to operate, 1-32 characters.	
Password	FTP service user password to operate, 1-16 characters.	
State	Plain text	Do not encrypt FTP service password.
	Encrypted	Encryption of FTP service passwords.
Operation type	Add	Add operations.
	Remove	Delete operations.

1.5 Telnet server configuration

1.5.1 Telnet server state

Telnet server status module, where users can enable or disable login switches by Telnet.

Telnet server state	
Telnet server state	Open ▾
Apply	

Figure 27.

1.5.2 Max numbers of telnet access connection

Telnet connect the maximum number module, the user can configure the maximum number of connections to the switch by Telnet.

Max numbers of telnet access connection	
Telnet access connection number	<input type="text"/>
Operation	Configuration ▾
Apply	

Information feedback window	
Telnet access connection number	5

Figure 28.

Telnet access connection number	Maximum number of connections logged in by Telnet, range 1-16 (default 5).	
Operation	Configuration	Configuration operations.
	Default	Restore default.

1.6 Maintenance and debugging command

1.6.1 Debug command

Maintenance and debugging command module. the user can configure the mapping relationship between host and IP, also can run ping command and route tracking command.

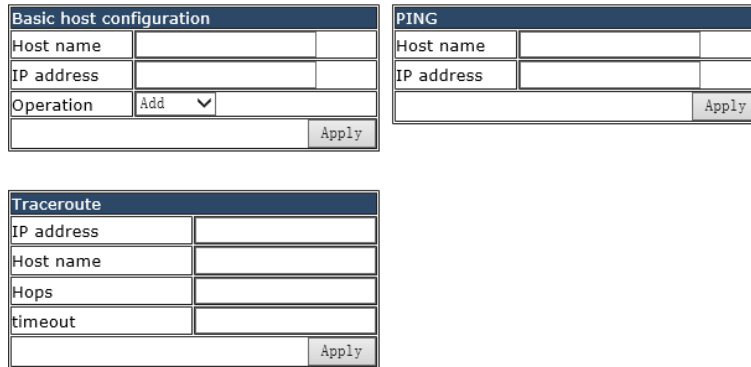

Figure 29.

Host name	Host name for mapping, 1-64 characters.	
IP address	IP address for mapping, point decimal.	
Operation	Add	Add operations.
	Remove	Delete operations.

Host name	To ping the host name, configure the mapping relationship between the host and the IP.
IP address	IP address to ping, decimal.

IP address	IP address for routing tracing, point decimal.
Host name	Host name for routing tracing, 1-64 characters.
Hops	Number of hops, route, range 1-255.
timeout	Tracking timeout, 100-10000.

1.6.2 show clock

This module is used to display the current system time and date.

Figure 30.

1.6.3 show cpu usage

This module is used to display resource usage cpu current system.

```

entry	describe
Port	Ethernet port name.
VLAN ID	VLAN ID, range 1-4094.
Operation	Add: Enable VLAN loop detection Remove: Disable VLAN loop detection

3.4.3 Loopback-detection interval-time configuration

This page can be used to configure the loop detection interval.

To display the "Loopback-detection interval-time configuration" page, click Port configuration -> Port Loopback-detection configuration -> Loopback-detection interval-time configuration, click "Apply" to configure.

Loopback-detection interval-time configuration	
Loopback-detection interval time	<input type="text"/>
no Loopback-detection interval time	<input type="text"/>
Operation	Configuration <input type="text"/>
<input type="button" value="Apply"/>	

Figure 64.

entry	describe
Loopback-detection interval time	Interval time between loops, size 5-300 seconds.
no Loopback-detection interval time	No loop interval, size 1-30 seconds.

Operation	Configuration: Set the test time by yourself. Default: Restore the default configuration, there is a loop detection interval of 5 seconds, there is no loop detection interval of 3 seconds.
------------------	---

3.4.4 Loopback-detection control recovery configuration

This page is used to configure loop detection to automatically return to an uncontrolled state.

To display the "Loopback-detection control recovery configuration" page, click Port configuration -> Port Loopback-detection configuration -> Loopback-detection control recovery configuration, click "Apply" to configure.

Figure 65.

entry	describe
Recovery switch timeout	When a port is disabled or blocked due to a loop, it automatically recovers to an uncontrolled time, the size range is 0-3600 seconds. When it is configured as 0, the auto recovery function is disabled.

3.5 Isolate-port configuration

This section can set up port isolation related functions.

3.5.1 Isolate-port group configuration

This page can be used to add or delete isolated groups.

To display the "Isolate-port group configuration" page, click Port configuration -> Isolate-port configuration -> Isolate-port group configuration, click "Apply" to configure.

Figure 66.

entry	describe
Group name	Isolation group name, example: aaaa.
Operation	Add: Create an isolation group

	Remove: Delete an isolation group
--	-----------------------------------

3.5.2 Interface join group config

This page can be used to add ports for isolation groups.

To display the "Interface join group config" page, click Port configuration -> Isolate-port configuration -> Interface join group config, click "Apply" to configure.

Interface join group config	
Group name	<input type="text"/>
Port	Ethernet1/0/1 <input type="button" value="v"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 67.

entry	describe
Group name	Created isolation group name, example: aaaa.
Port	Ethernet port name.
Operation	Add: Add ports to the isolation group Remove: Delete ports in isolation groups

3.5.3 show isolate-port group

This page is used to display isolation group information.

To display the "show Isolate-port group" page, click Port configuration -> Isolate-port configuration -> show Isolate-port group, click "Apply" to view.

show Isolate-port group	
Group name	<input type="text"/>
<input type="button" value="Apply"/>	

Figure 68.

entry	describe
Group name	Created isolation group name, example: aaaa.

3.6 Port storm-control config

This chapter can set up storm control related functions.

3.6.1 Port storm-control config

This page can be configured for the storm control function of the port.

To display the "Port storm-control config" page, click Port configuration -> Port storm-control config -> Port storm-control config, click "Apply" to configure.

storm-control configuration	
Port	Ethernet1/0/1 ▾
storm-control type	broadcast ▾
storm-control value	<input type="text"/>
Operation	Add ▾
<input type="button" value="Apply"/>	

Figure 69.

entry	describe
Port	Ethernet port name.
storm-control type	Broadcast/Multicast/Unicast
storm-control value	Storm control rate, ranging from 1-1000000 kbps or 1-1488095 pps.
Operation	Add: Turn on the storm control function and configure the speed limit Remove: Disable Storm Control

Information feedback window	
Port	storm-control type
Ethernet1/0/1	None
Ethernet1/0/2	None
Ethernet1/0/3	None
Ethernet1/0/4	None

Ethernet1/0/7	None
Ethernet1/0/8	None

Figure 70.

entry	describe
Port	Ethernet port name.

storm-control type	Broadcast/Multicast/Unicast
---------------------------	-----------------------------

3.6.2 storm-control bypass configuration

This page can configure storm control unit, filter protocol, filter protocol status and other functions. To display the "storm-control bypass configuration" page, click Port configuration -> Port storm-control config -> storm-control bypass configuration, click "Apply" to configure.

storm-control configuration	
storm-control type:	bypass ▾
storm-control bypass protocol:	arp ▾
storm-control bypass protocol status:	disable ▾
<input type="button" value="Apply"/>	

Figure 71.

entry	describe
storm-control type	Bypass: Bypass Protocol Kbps: Storm control rate units pps: Storm control rate units
storm-control bypass protocol	Broadcast Storm Filter Agreement
storm-control bypass protocol status	Disable: Disable protocol filtering Enable: Enable protocol filtering

3.7 Port rate-violation config

This chapter is mainly used for the configuration of rate limiting functions.

3.7.1 rate-violation configuration

This page is mainly used to configure the rate limit function.

To display the "rate-violation configuration" page, click Port configuration -> Port rate-violation config -> rate-violation configuration, click "Apply" to configure.

Port rate-violation config	
Port	Ethernet1/0/1 ▾
rate-violation type	all ▾
rate-violation value	
rate-violation sub type	shutdown ▾
rate-violation recover time	
Operation	Add ▾
Apply	

Figure 72.

entry	describe
Port	Ethernet port name.
rate-violation type	Type of breach: All/Broadcast/Multicast/Unicast/ Control: Operation violation
rate-violation value	Limit rate, range 200-2000000.
rate-violation sub type	Overspeed operation: Shutdown: Disable port Block: Block port
rate-violation recover time	The time when the port overspeed is automatically resumed after it is disabled, if the size is 0-86400 seconds, configuring 0 seconds means no automatic recovery.
Operation	Add: Function Enable Remove: Function disabled

3.8 Port virtual-cable-test config

This chapter can be used to detect port link lines.

3.8.1 virtual-cable-test configuration

This chapter can be used to detect port link lines.

To display the "virtual-cable-test configuration" page, click Port configuration -> Port virtual-cable-test config -> virtual-cable-test configuration, click "Apply" to configure.

virtual-cable-test configuration	
Port	Ethernet1/0/1 ▾

Operation	Enable ▾
<input type="button" value="Apply"/>	

Figure 83.

entry	describe
Port	Ethernet port name.

LLDP port enable type	Enable or disable LLDP functions.
Operation	Turn on or off LLDP function.

3.11.2 LLDP port status config

This page can configure port status.

To display the "LLDP port status config" page, click Port configuration -> LLDP configuration -> LLDP port status config, click "Apply" to configure.

Figure 84.

entry	describe
Port	Ethernet port name.
LLDP port status	Send: Send only data Receive: Receive only data Both: Sending and receiving data simultaneously Disable: Both sending and receiving are prohibited

3.11.3 LLDP tx-interval config

This page can configure the interval between sending updates.

To display the "LLDP tx-interval config" page, click Port configuration -> LLDP configuration -> LLDP tx-interval config, click "Apply" to configure.

Figure 85.

entry	describe
LLDP Hello message time	Update message sending interval between 5-32768 seconds.
Operation	Configuration:

	User self-configuration Default: Restore the default configuration, the default configuration is 30 seconds.
--	--

3.11.4 LLDP msgTxHold config

This page can configure the value of the message aging time multiplier.

To display the "LLDP msgTxHold config" page, click Port configuration -> LLDP configuration -> LLDP msgTxHold config, click "Apply" to configure.

Figure 86.

entry	describe
LLDP msgTxHold value	Numerical magnitude between 2-10.
Operation	Configuration: User self-configuration Default: Restore default configuration, default configuration is 4.

3.11.5 LLDP transmit delay config

This page can configure the sending delay time of the update message.

To display the "LLDP transmit delay config" page, click Port configuration -> LLDP configuration -> LLDP transmit delay config, click "Apply" to configure.

Figure 87.

entry	describe
LLDP transmit delay value	Value between 1-8192 seconds.
Operation	Configuration:

	User self-configuration Default: Restore default configuration for 2 seconds
--	--

3.11.6 LLDP notification interval config

This page can configure the interval between sending Trap messages.

To display the "LLDP notification interval config" page, click Port configuration -> LLDP configuration -> LLDP notification interval config, click "Apply" to configure.

Ethernet1/0/5	Disable
Ethernet1/0/6	Disable
Ethernet1/0/7	Disable
Ethernet1/0/8	Disable

Figure 124. Display the VLAN-translation status of each port.

5.3.2 Add/Delete VLAN-translation

Switch VLAN-translation conversion settings, the user sets the VLAN-translation conversion relationship.

Add/Delete VLAN-translation	
Port	Ethernet1/0/1 ▾
source vlan ID	Vlan1 ▾
destination vlan ID	Vlan1 ▾
dirction	in ▾
Operation	Add ▾
<input type="button" value="Apply"/>	

Figure 125.

Port	Port name.	
Source vlan ID	Configured VLAN.	
Destination vlan ID	Configured VLAN.	
dirction	in	Configure the conversion direction of VLAN-translation as the ingress conversion function.
	out	Configure the conversion direction of VLAN-translation as the egress conversion function.
Operation	Add	Add VLAN-translation conversion relationship.
	Remove	Remove VLAN-translation conversion relationship.

5.3.3 VLAN-translation miss drop configuration

When the switch VLAN-translation fails to find the translation relationship, the packet loss settings are set. The user sets the direction of the packet loss configuration when the VLAN-translation finds the translation relationship.

VLAN-translation miss drop configuration	
Port	Ethernet1/0/1 ▾
dirction	both ▾
Operation	Configuration ▾
Apply	

Figure 126.

Port	Port name.	
dirction	both	The port performs VLAN-translation search and translation relationship configuration for packet loss at both the egress and the ingress.
	in	Packet loss configuration when the port performs VLAN-translation lookup translation relationship at the ingress.
	out	Packet loss configuration when the port performs VLAN-translation lookup translation relationship at the egress.
Operation	Configuration	Add VLAN-translation to find the packet loss configuration when searching for translation relations.
	Cancel	Delete the configuration of packet loss when searching for translation relationship in VLAN-translation.

5.3.4 show VLAN-translation

The display of switch VLAN-translation related configuration, the user can check the switch VLAN-translation configuration.

show VLAN_translation	
Apply	

Figure 127.

Apply	Confirm that you want to view VLAN-translation related configuration information.

Operation type	Add	Add the mrouter port parameter configuration checked under the selected VLAN.
	Remove	Delete the mrouter port parameter configuration checked under the selected VLAN.

8. Time Range configuration

8.1 Time Range configuration

Time Range configuration module, the user can add or delete the operation of in this module, which can be applied to various ACL.

In the absolute mode you must input the start-time , end-time is not necessary.

You must input the weeks, start-time and end-time, but need not input the date including start and end time in the absolute-periodic. You must input the weeks, start-time and end-time, but need not input the date including start and end time, and may input multi-week values,separate them with ",", such as:1-7:monday-sunday;31:daily;96:weekdays;127:weekend.

Input date format: YYYY.MM.DD.Input week format: number (1:Monday etc.),if input multi-week values,separate them with ",",such as:1,2 identify monday&tuesday..Input time format: HH:MM:SS.

9.3 Filter configuration

9.3.1 Firewall configuration

Firewall ACL configuration module in which users can operate switch firewall configuration.

Switch firewall configuration	
Packet filtering	open ▾
Firewall default action	permit ▾
Apply	

Figure 161.

Packet filtering	open	open
	close	close
Firewall default action	permit	Rule permit.
	deny	Rule deny.

9.4 Show ACL configuration

9.4.1 Show access list

The access control list module is displayed in which the user can display ACL specified information or all ACL information.

Show access list	
Access list	ALL
Apply	

Figure 162.

Access list	Specify the ACL name or number to display ALL display all ACL.
--------------------	--

9.4.2 Show firewall

Display packet filtering function configuration information module, user in this module can display firewall status information.

Show firewall	
Refresh	

Figure 163.

9.4.3 Show time range

Display time range function configuration information module, where users can display configured custom time information.

Show time range	
Time-range name	ALL
Apply	

Figure 164.

Time-range name	Specifies the time period name to display, ALL displays all time period information.
------------------------	--

9.5 ACL binding configuration

9.5.1 Attach ACL to port

ACL port binding module, the user can bind and delete the access list of the specified port.

Attach ACL to port	
Port	Ethernet1/0/1
ACL type	IP
List name	
ACL Attached Direction	in
Operation type	Add
Apply	

Figure 165.

Port	Designated port number.	
ACL type	IP	IP type.
	MAC	MAC type.
	MAC-IP	MAC-IP type.
List name	Specify access list name, 1-64 characters.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.
Operation type	Add	Add operations.
	Remove	Delete operations.

9.5.2 Show access group

The configuration information module on ACL display port, where the user can display the ACL binding information of the specified port or all ports.

Show access group	
Port	ALL
ACL Attached Direction	in
Apply	

Figure 166.

Port	Specifies the port number to display the information ALL displays all port information.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.

9.5.3 Clear Pacl Statistic

The statistical information module ACL the port, where the user can clear the ACL statistics of the specified port.

Figure 167.

Port or Interface name	Specifies the port number to clear statistics.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.

9.5.4 Attach ACL to vlan

ACL vlan binding module, where users can bind and delete access lists to specified VLAN.

Figure 168.

VLAN interface	Specifies the VLAN number to operate on.	
ACL type	Specifies the type of ACL to bind: IP.MAC.MAC-IP.	
List name	Specify access list name, 1-64 characters.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.
Operation type	Add	Add operations.
	Remove	Delete operations.

9.5.5 show vacl configuration

The vlan acl configuration information module is displayed in which the user can display ACL binding information for the specified VLAN or all VLAN.

show vacl configuration	
VLAN interface	Vlan1 ▾
ACL Attached Direction	in ▾
Apply	

Figure 169.

9.5.6 clear vlan acl statistic

Clear the VLAN acl statistical information module, where the user can clear the ACL statistics of the specified VLAN.

clear vlan acl statistic	
VLAN interface	Vlan1 ▾
ACL Attached Direction	in ▾
Apply	

Figure 170.

VLAN interface	Specifies the VLAN number to clear statistics.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.

10. IPv6 ACL configuration

10.1 IPv6 standard access-list configuration

IPv6 standard access list configuration module, users can create, delete or modify parameters for digital standard IPv6 access lists.

IPv6 standard access-list configuration	
Access list number	<input type="text"/>
Rule	permit ▾
Source address type	host-source ▾
IPv6 address	<input type="text"/>
Operation	Add ▾
Apply	

Figure 171.

Access list number	Digital Standard IPv6 Access List Number, 500-599.	
Rule	Permit	Rule permit.
	Deny	Rule deny.
Source address	Specifies IPv6	Matches IPv6 specified source host.

type	source host	
	All IPv6 source hosts	Match any IPv6 source host.
	IPv6 source address	Match IPv6 specified source address.
IPv6 address	IPv6 address to operate.	
Operation	Add	Add operations.
	Remove	Delete operations.

10.2 IPv6 name access-list configuration

IPv6 named access table configuration module, the user can create, delete, or modify parameters on the named standard IPv6 access list.

Figure 172.

IPv6 name access-list	Name of access list.	
Rule	Permit	Rule permit.
	Deny	Rule deny.
Source address type	Specifies IPv6 source host	Matches IPv6 specified source host.
	All IPv6 source hosts	Match any IPv6 source host.
	IPv6 source address	Match IPv6 specified source address.
IPv6 address	IPv6 address to operate.	
Operation	Add	Add operations.
	Remove	Delete operations.

10.3 Show IPv6 access list

Show IPv6 access control list module where users can display IPv6 access list to create, delete, or modify parameters.

Show IPv6 access list	
List name	<input type="text"/>
<input type="button" value="Apply"/>	

Figure 173.

List name	Specifies the ACL name or number to display, 0-64 characters.
------------------	---

10.4 Attach IPv6 ACL to port

IPv6 ACL port binding module, the user can bind and delete the IPv6 access list on the specified port.

Attach IPv6 ACL to port	
Port	Ethernet1/0/1 <input type="button" value="v"/>
List name	<input type="text"/>
ACL Attached Direction	in <input type="button" value="v"/>
Operation type	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 174.

Port	Designated port number.	
List name	Specify access list name, 1-64 characters.	
ACL Attached Direction	in	Application ACL only.
	in and traffic-statistics	Application ACL and flow monitoring.
Operation type	Add	Add operations.
	Remove	Delete operations.

10.5 Attach IPv6 ACL to vlan

IPv6 ACL VLAN binding module, the user can bind and delete the IPv6 access list to the specified VLAN.

Attach IPv6 ACL to vlan	
VLAN interface	Vlan1 <input type="button" value="v"/>
List name	<input type="text"/>
ACL Attached Direction	in <input type="button" value="v"/>

11. AM configuration

11.1 AM global configuration

11.1.1 Enable/Disable AM

AM switch configuration module, the user can start or close the global AM function in this module.

The figure shows two screenshots from a network configuration interface. The top screenshot is titled 'Enable/Disable AM' and contains a form with 'AM status' set to 'Enable' and an 'Apply' button. The bottom screenshot is titled 'Information feedback window' and shows 'AM status' as 'Enable'.

Figure 176.

11.2 AM port configuration

11.2.1 Enable/Disable AM port

AM port switch configuration module, where the user can start or close the AM function of the specified port.

The figure shows two screenshots from a network configuration interface. The top screenshot is titled 'Enable/Disable AM port' and contains a form with 'Port' set to 'Ethernet1/0/1' and 'AM port status' set to 'Enable', with an 'Apply' button. The bottom screenshot is titled 'Information feedback window' and shows a table with the following data:

Port	AM port status
Ethernet1/0/1	Disable
Ethernet1/0/2	Disable
Ethernet1/0/3	Disable
Ethernet1/0/4	Disable

Figure 177.

Port	Specifies the port number.
AM port status	Enable or disable.

11.2.2 AM IP-Pool configuration

AM IP-Pool configuration module, the user can set up an AM IP segment on the specified port, allowing / rejecting messages within the segment to be forwarded through the port.

AM IP-Pool configuration	
Port	Ethernet1/0/1 ▾
IP address	<input type="text"/>
Count	<input type="text"/>
Operation	Add ▾
<input type="button" value="Apply"/>	

Figure 178.

Port	Designated port number.	
IP address	Beginning IP address, decimal point.	
Count	Number of consecutive addresses after starting IP address, 1-32.	
Operation	Add	Add operations.
	Remove	Delete operations.

11.2.3 AM MAC-IP-Pool configuration

AM MAC-IP-Pool configuration module, the user can set up an AM MAC-IP segment on the specified port, allowing / rejecting messages from within the segment to be forwarded through the port.

AM MAC-IP-Pool configuration	
Port	Ethernet1/0/1 ▾
IP address	<input type="text"/>
MAC address	<input type="text"/>
Operation	Add ▾
<input type="button" value="Apply"/>	

Figure 179.

Port	Designated port number.	
IP address	Beginning IP address, decimal point.	
MAC address	Source MAC address.	
Operation	Add	Add operations.
	Remove	Delete operations.

11.3 Show AM port configuration

11.3.1 Show AM port configuration

The AM port configuration module is displayed in which the user can display the AM function configuration information of the specified port.

Show AM port configuration	
Port	<input type="text"/>
<input type="button" value="Apply"/>	

Figure 180.

Figure 222. Display the current DHCP Snooping status.

14.1.2 DHCP Snooping binding configuration

When DHCP Snooping binding is enabled and disabled, users can view and operate the status of DHCP Snooping. When configuring this binding, users must ensure that the binding status is in the on state.

Enable/Disable DHCP Snooping binding	
DHCP Snooping binding status	Disable ▾
Apply	

Figure 223.

DHCP Snooping binding status	Disable	Disable DHCP Snooping binding function.
	Enable	Enable DHCP Snooping binding function.

Figure 224. Shows whether the current DHCP Snooping binding status function is enabled.

14.1.3 DHCP Snooping binding user configuration

When DHCP Snooping binding is enabled and disabled, users can view and operate the status of DHCP Snooping. When configuring this binding, users must ensure that the binding status is in the on state.

DHCP Snooping binding user configuration	
MAC address	<input type="text"/>
User IP address	<input type="text"/>
User mask	<input type="text"/>
VLAN ID	<input type="text"/>
Port	Ethernet1/0/1 <input type="button" value="v"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 225.

MAC address	The MAC address of the statically bound user is the only index of the bound user.	
User IP address	Statically bind the user's IP address.	
User mask	Statically bind the user's subnet mask.	
VLAN ID	Statically bind the VLAN ID of the user.	
Port	Bind the user's access port statically, the port is associated with the VLAN ID, and the port is required to allow the VLAN to pass.	
Operation	Add	Add DHCP Snooping binding user relationship.
	Remove	Delete DHCP Snooping binding user relationship.

Figure 226. Display the process and error messages or results generated during application execution.

14.1.4 DHCP Snooping action count config

DHCP Snooping defense action number configuration, if the number of alarm messages is greater than the set number, it will force the restoration of the earliest defense measures to send new defense measures.

DHCP Snooping action count config	
DHCP Snooping action count	<input type="text"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 227.

DHCP Snooping action count	Set the maximum number of defense actions to avoid exhaustion of switch resources caused by attacks.	
Operation	Add	Configure the number of defense actions filled in above.
	Remove	Reduce the number of defense actions to 10.

Information feedback window	
DHCP Snooping action count	10

Figure 228. Display the current number of DHCP Snooping defense actions.

14.1.5 DHCP Snooping limit-rate config

DHCP Snooping packet receiving rate limit sets the number of DHCP messages sent per second.

DHCP Snooping limit-rate config	
Packet per second	<input type="text"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 229.

Packet per second	Range: 0-100.	
Operation	Add	Configure the number of packets per second.
	Remove	Restore the default number of packets per second, the default is 100.

Information feedback window	
Packet per second	100

Figure 230. Display the number of packets per second configured for the current DHCP Snooping.

14.1.6 DHCP Snooping helper-server config

DHCP SNOOPING will send the monitored binding information to HELPER SERVER for storage. If the switch starts abnormally, you can recover the bound data from the HELPER SERVER.

DHCP Snooping helper-server config	
Helper-server address	<input type="text"/>
Helper-server UDP port	<input type="text"/>
Local IP address	<input type="text"/>
Second address	<input type="text"/> ▼
Operation	Add ▼ <input type="text"/>
<input type="button" value="Apply"/>	

Figure 231.

Helper-server address	HELPER server address.	
Helper-server UDP port	DHCP SNOOPING and HELPER SERVER use UDP protocol for communication, the port range is 1-65535.	
Local IP address	The effective management IP address of the switch.	
Second address	Two HELPER server addresses are allowed, DHCP SNOOPING will first try to connect to the PRIMARY server. Only when the PRIMARY server cannot be accessed, the switch HELPER server will connect to the SECONDARY server. Set the PRIMARY server before setting up the SECONDARY server.	
Operation	Add	Add HELPER server address.
	Remove	Delete the HELPER server address, you can leave it blank when deleting.

```

Information feedback window
Switch# config t
Switch(config)# no ip user helper-address
    
```

Figure 232.

Display the process and error messages or results generated during application execution.

14.2 DHCP Snooping port configuration

14.2.1 Enable/Disable DHCP Snooping binding dot1x

DHCP SNOOPING will notify the DOT1X module of the binding information captured by the user controlled by the DOT1X. DHCP Snooping port binding dot1x function needs to enable DHCP Snooping binding configuration first.

Enable/Disable DHCP Snooping binding dot1x	
Port	DHCP Snooping binding dot1x status

entry	describe
Port	Ethernet port name.
Port trust status	trust-port: Trust port. supertrust-port: Super trust port. iptrust-port: IP trust port.
Operation	Add: Application settings. Remove: Delete the corresponding settings.

18.4.2.5 ANTI-ARPSCAN trust IP configuration

This page can be used to prevent ARP scanning trust IP configuration.

To display the “ANTI-ARPSCAN trust IP configuration” page, click L3 forward configuration -> ARP protection configuration -> ANTI-ARPSCAN configuration -> ANTI-ARPSCAN trust ip configuration, click “Apply” to configure.

ANTI-ARPSCAN trust IP configuration	
IP address	<input type="text"/>
Network mask	<input type="text"/>
Operation	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 318.

entry	describe
IP address	IP address, e.g .1.1.1.1.
Network mask	Corresponding IP address mask.
Operation	Add: Application settings. Remove: Delete the corresponding settings.

18.4.2.6 ANTI-ARPSCAN recovery on-off configuration

This page can be used to prevent ARP scanning automatic recovery switch configuration.

To display the “ANTI-ARPSCAN recovery on-off configuration” page, click L3 forward configuration ARP protection configuration -> ANTI-ARPSCAN configuration -> ANTI-ARPSCAN recovery on-off configuration, click “Apply” to configure.

The screenshot shows two parts of the configuration interface. The top part is the configuration page with a title bar 'ANTI-ARPSCAN recovery on-off configuration', a dropdown menu for 'ANTI-ARPSCAN recovery on-off status' set to 'Enable', and an 'Apply' button. The bottom part is the status page with a title bar 'ANTI-ARPSCAN recovery on-off status' and a dropdown menu for 'ANTI-ARPSCAN recovery on-off status' set to 'Enable'.

Figure 319.

entry	describe
ANTI-ARPSCAN recovery on-off status	Enable: Enable automatic recovery function. Disable: Disable automatic recovery function.

18.4.2.7 ANTI-ARPSCAN recovery time configuration

This page can be used to configure the automatic recovery time against ARP scanning.

To display the “ANTI-ARPSCAN recovery time configuration” page, click L3 forward configuration -> ARP protection configuration -> ANTI-ARPSCAN configuration -> ANTI-ARPSCAN recovery time configuration, click “Apply” to configure.

The screenshot shows two parts of the configuration interface. The top part is the configuration page with a title bar 'ANTI-ARPSCAN recovery time configuration', a text input field for 'Recovery time', a dropdown menu for 'Operation' set to 'Configuration', and an 'Apply' button. The bottom part is the status page with a title bar 'ANTI-ARPSCAN recovery time configuration' and a text input field for 'Recovery time' set to '300'.

Figure 320.

entry	describe
Recovery time	Size range: 5-86400 per second.

Operation	Configuration: Apply the above settings. Default: Recovery default auto recovery 300 seconds.
------------------	--

18.4.2.8 Show ANTI-ARPSCAN information

This page is used to view anti ARP scan run information.

To display the “Show ANTI-ARPSCAN information” page, click L3 forward configuration -> ARP protection configuration -> ANTI-ARPSCAN configuration -> Show ANTI-ARPSCAN information, click “Apply” to view.

```

Information feedback window

19. Route configuration

19.1 Policy based routing

The directory function is to be developed.

19.2 Static route configuration

19.2.1 Static route configuration

This page can be used for the basic configuration of static routing.

To display the "Static route configuration" page, click Route configuration -> Static route configuration -> Static route configuration, click "Apply" to configure.

Static IP route configuration	
Destination IP address	<input type="text"/>
Network mask or prefix-length	<input type="text"/>
Nexthop or Interface null0	<input type="text"/>
preference(optional)	<input type="text"/>
Operation type	Add <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 323.

entry	describe
Destination IP address	IP address, format: 10.10.11.11.
Network mask or prefix-length	Subnet mask in the following format: 255.255.255.0; or mask length.
Nexthop or Interface null0	IP address, format: 10.10.11.11. or null0.
Preference (optional)	Range: 1-255.
Operation type	Add: Add the above settings. Remove: Delete the above.

20. IPv6 Route configuration

20.1 IPv6 configuration

20.1.1 IPv6 basic configuration

This page is used to vlan the ipv6 address of the interface and the configuration of ipv6 routing.

If you want to display the "IPv6 Basic Configuration" page, click IPv6 Route configuration -> IPv6 configuration -> IPv6 basic configuration, click "Apply" to configure.

IPv6 basic configuration	
command	ipv6 address <input type="button" value="v"/>
VLAN interface	Vlan1 <input type="button" value="v"/>
IPv6 address(X:X::X:X/M)	<input type="text"/>
EUI-64	<input type="button" value="v"/>
Operation	Configuration <input type="button" value="v"/>
<input type="button" value="Apply"/>	

Figure 324.

entry	describe
IPv6 address	Vlan interface ipv6 address configuration.
VLAN interface	Vlan created.
IPv6 address	Example: 2001:3f:ed8::99/64.
EUI-64	IPv6 address is automatically generated based on the eui64 interface identifier of the interface.
Operation	Configure: User self-configuration. Default: Restore default configuration.

IPv6 basic configuration	
command	ipv6 route ▾
IPv6 Destination address(X:X::X:X/M)	<input type="text"/>
IPv6 nexthop address(X:X::X:X)	<input type="text"/>
VLAN interface	▾
IPv6 tunnel number	<input type="text"/>
Precedence	<input type="text"/>
Operation	Configuration ▾
<input type="button" value="Apply"/>	

Figure 325.

Note: the switch does not support ipv6 routing configuration, the configuration of this page is not effective.

20.1.2 IPv6 ND configuration

This page is used for settings that can be used for neighbor discovery related functions.

If you display the “IPv6 ND Configuration” page, click IPv6 Route configuration -> IPv6 configuration -> IPv6 ND Configuration, click “Apply” to configure.

IPv6 ND configuration	
command	dad attempts ▾
VLAN interface	Vlan1 ▾
IPv6 dad-attempts	<input type="text"/>
Operation	Configuration ▾
<input type="button" value="Apply"/>	

Figure 326.

entry	describe
--------------	----------

Data attempts	During duplicate address detection, the neighbor request message number continuously sent by the interface is set.
VLAN interface	Vlan created.
IPv6 dad-attempts	Range: 0-10.
Operation	Configuration: Apply the above settings. Default: Default request message number is 1.

IPv6 ND configuration	
command	ns-interval ▾
VLAN interface	Vlan1 ▾
IPv6 ns-interval	
Operation	Configuration ▾
<input type="button" value="Apply"/>	

Figure 327.

entry	describe
ns-interval	Time interval setting for neighbor request messages.
VLAN interface	Vlan created.
IPv6 ns-interval	Size range: 1-3600, per second.
Operation	Configuration: Apply the above settings. Default: Default request message number is 1 second.

IPv6 ND configuration	
command	neighbor ▾
VLAN interface	Vlan1 ▾
IPv6 address	
MAC address	
Port	Ethernet1/0/1 ▾
Operation	Configuration ▾
<input type="button" value="Apply"/>	

Figure 328.

entry	describe
--------------	----------

Neighbor	Set the Static Neighbor Table Item.
VLAN interface	Vlan created.
IPv6 address	Static Neighbor IPv6 Address.
MAC address	Static Neighbor MAC Address.
Port	Ethernet port name.
Operation	Configuration: Apply the above settings. Default: Delete the corresponding static neighbor table item.

IPv6 ND configuration	
command	clear ipv6 neighbors ▾
Operation	Configuration ▾
<input type="button" value="Apply"/>	

Figure 329.

entry	describe
Clear ipv6 neighbor	Clear neighbor table items, but can not delete static neighbor table items.
Operation	Configuration: Delete neighbor table item. Default: Delete Neighbor Table Item.

20.1.3 Show IPv6 neighbor

Authentication server IP	TACACS authentication server IPv4 address, decimal point.	
Authentication server port	TACACS authentication server port number (optional), 0-65535.	
Primary authentication server	Primary accounting server	Specify TACACS server as primary accounting server.
	Non-Primary accounting server	Specify TACACS server as non-primary accounting server.
Operation	Add	Add operations.
	Remove	Delete operations.

26.3 802.1x configuration

26.3.1 802.1x Global configuration

802.1x Global Configuration Module, the users in this module can configure the global 802.1x function services.

802.1x configuration	
802.1x status	Disable ▾
Maximum retransmission times of EAP-request/identity	2
Reauthenticate client periodically	Disable ▾
Holddown time for authentication failure	10
Reauthenticate client interval	3600
Resending EAP-request/identity interval	30
EAP relay authentication mode	forbid ▾
Private client	forbid ▾
MAC filtering	forbid ▾
802.1x unicast	Disable ▾
Apply	

Figure 433.

802.1x status	Boot or turn off 802.1x function.
Maximum retransmission times of EAP-request/identity	Scope 1-10.
Reauthenticate client periodically	Start or close periodic recertification.
Holddown time for authentication failure	Range 1-65535 seconds, default 10 seconds.
Reauthenticate client interval	Range 1-65535 seconds, default 3600 seconds.
Resending EAP-request/identity interval	Range 1-65535 seconds, default 30 seconds.

EAP relay authentication mode	Ban or permit EAP relay authentication.
Private client	Prohibit or allow private clients.
MAC filtering	Ban or permit MAC address filtering.
802.1x unicast	Disable or enable 802.1x unicast teleport function.

26.3.2 802.1x port authentication configuration

802.1x port authentication configuration module, in this module the users can configure the 802.1x function of the specified port.

802.1x port configuration	
Port	Ethernet1/0/1 ▾
802.1x status	Disable ▾
Authentication type	force-unauthorized ▾
Authentication mode	Port-based ▾
Port maximum user	1
Guest VLAN ID	0
Apply	

Figure 434.

Port	Designated port number.	
802.1x status	Boot or close 802.1x on this port.	
Authentication type	force-unauthorized	Mandatory unauthorized.
	force-authorized	Mandatory authorization.
	Auto (802.1x)	automatism (802.1x authorization).
Authentication mode	Port-based	Based on port.
	Mac-based	Based on MAC.
Port maximum user	Maximum number of users allowed to connect to the ports, 1-256, default 1.	
Guest VLAN ID	Guest VLAN, 0-4094, default 0.	

26.3.3 802.1x port MAC configuration

802.1x port MAC configuration module, the users in this module can add or delete port 802.1x functions MAC specified ports.

802.1x port MAC configuration	
Port	Ethernet1/0/1 ▾
Mac	<input type="text"/>
Operation	Add MAC filter entry ▾
<input type="button" value="Apply"/>	

Figure 435.

Port	Specifies the port number.
MAC	MAC address to operate.
Operation	Add or delete port MAC address filter table items.

26.3.4 802.1x port status list

802.1x port MAC status list, the user can view 802.1 status information on x specified port and authenticate 802.1x in this module.

802.1x port status list	
Port	Ethernet1/0/1 ▾
802.1x status	Disable
Authentication type	NULL
Authentication status	Unauthenticated
Authentication mode	No authentication mode
<input type="button" value="Reauthenticate"/>	

Figure 436.

26.4 MAB configuration

26.4.1 MAB ENABLE configuration

MAB enable configuration module, the users in this module can MAB the function of global enable and specified port enable operation.

MAB global enable configuration	
MAB global enable	Enable ▾
Apply	

MAB port enable configuration	
Port	Ethernet1/0/1 ▾
MAB port enable	Enable ▾
Apply	

Figure 437.

MAB global enable	Global enable or disable MAB function.
Port	Specifies the port number.
MAB port enable	Function on or off MAC specified port.

26.4.2 MAB Authentication configuration

MAB user authentication configuration module, the users in this module can configure the MAB user authentication mode.

MAB Authentication configuration	
MAB Authentication TYPE	MAC address ▾
username	
password	
Apply	

Figure 438.

MAB Authentication TYPE	Mac address	Authentication based on MAC address.
	Username and password	Authentication based on username and password (to be configured).
username	user name for authentication, 1-32 characters.	
password	password for authentication, 1-32 characters.	

26.4.3 MAB parameter configuration

MAB parameter configuration module, the users in this module can configure the parameters of the MAB function.

MAB parameter configuration	
Port	Ethernet1/0/1 ▾
parameter type	guest vlan range ▾
value	<input type="text"/>
Enable ▾	
<input type="button" value="Apply"/>	

Figure 439.

Port	Specify port name.	
parameter type	Guest vlan range	VLAN operation for guest.
	Max binding value	Operation of maximum binding on ports.
value	After the parameter type is selected, the corresponding parameter value range can be set.	
Enable Disable	Boot or close port MAB parameter configuration.	

MAB parameter configuration	
parameter type	reauth-period ▾
value	<input type="text"/>
Enable ▾	
<input type="button" value="Apply"/>	

Figure 440.

parameter type	Reauth period	MAB time interval for re-authentication after failed authentication.
	Offline-detect	Detect the scan time of each port online status, 0 does not detect.
	Quiet-period	Configure the silence time after MAB authentication failure.
	Stale-period	Configure the time to delete bound users after the MAB port is closed.
	Linkup-period	Configure the restart time range after MAB port shutdown.
value	After the parameter type is selected, the corresponding parameter value can be set.	
Enable Disable	Boot or close global MAB parameter configuration.
